EDUTRACK

See progress.
Act earlier.

A student performance monitoring platform for private tutoring

PROJECT PRESENTATION

Teachers • Students • Parents

From scattered records to meaningful action

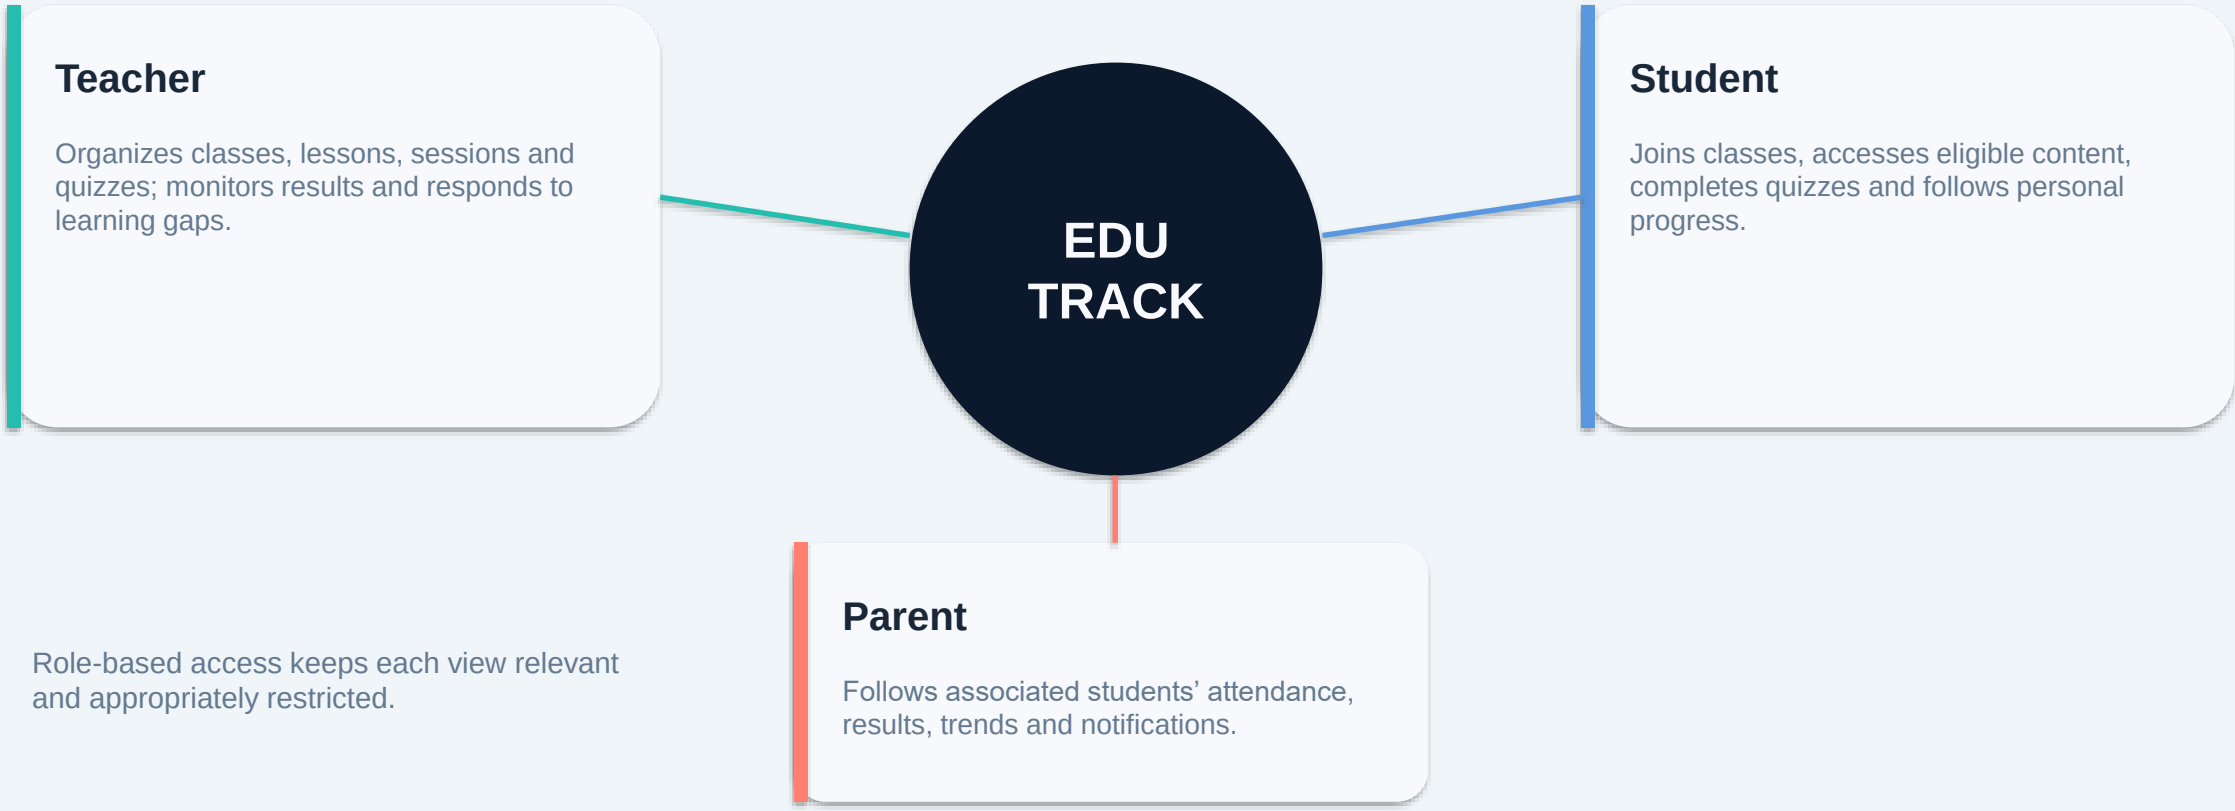

The challenge

Attendance, quiz scores and lesson progress can live in separate places—making it harder to spot where a student needs support.

The goal: replace impressions with evidence that leads to specific, timely intervention.

One platform. Three perspectives. One shared goal.

Role-based access keeps each view relevant and appropriately restricted.

A closed learning loop—not a one-time report

Detect a gap → notify the right people → recommend focused practice → check progress

Release 1: the complete core operating platform

IDENTITY & ACCESS

Teacher • Student • Parent accounts

CLASSES & ENROLLMENT

Class codes • enrollment status

ACADEMIC CONTENT

Subjects • topics • lessons

SESSIONS & ATTENDANCE

Scheduling • attendance history

ASSESSMENT

MCQ quizzes • automatic grading

MONITORING

Analytics • alerts • recommendations

NOTIFICATIONS

User-specific stored notifications

AI LATER

Future phase—not Release 1

Release 1 is designed to deliver useful monitoring without depending on AI.

Organize learning down to the lesson level

Why this matters

- A quiz is associated with one or more lessons—not directly with a topic.
- Topic context is reached through Lesson → Topic.
- Teachers can connect assessment evidence to the exact learning content.

Sessions create the evidence around learning

CLASS / WEEKLY SESSIONS

MON	Algebra • 4:00 PM
WED	Geometry • 5:00 PM
SAT	Statistics • 3:30 PM

ATTENDANCE RECORD

Student A	PRESENT
Student B	LATE
Student C	ABSENT
Student D	PRESENT

History supports progress monitoring and parent visibility.

Attendance is tied to a Student + Session; duplicate records for the same student/session are prevented.

Assessment is structured, fair and automatically graded

1
AUTHOR
Teacher creates quiz

2
VALIDATE
At least 1 lesson + 1 question

3
PUBLISH
Within availability window

4
ATTEMPT
One attempt per student / quiz

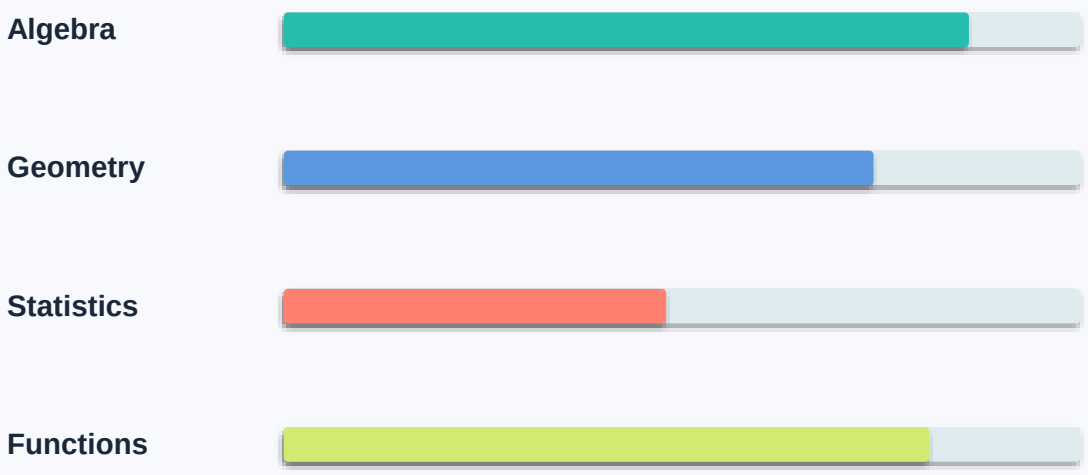

5
GRADE
Automatic score & result

Unanswered questions stay blank / unanswered and receive ZERO marks. • MCQ only in Release 1.

Quiz totals are derived from its question rows; students must be enrolled in the quiz’s class.

A broad average can hide a precise weakness

ILLUSTRATIVE TOPIC PERFORMANCE

SIGNAL

Statistics needs attention

A strong overall result may still conceal a lesson-level gap. Drill down before deciding what support is needed.

SAMPLE DATA ONLY

Performance is derived from quiz results, attempts, attendance and available historical data—not a separate base Performance table.

Turn a signal into a specific next step

PERFORMANCE SIGNAL

Recent decline in Statistics

Teacher-defined thresholds evaluate overall and recent performance.

!

ALERT

Teacher notified of the weak area

RECOMMENDED ACTION

Focused review + practice quiz

Teacher addresses the gap, then checks progress.

Alerts, recommendations and notifications remain separate records with distinct purposes and status.

Each role sees the information needed to act

T — TEACHER

Manage & intervene

- Create classes and content
- Schedule sessions / attendance
- Build quizzes and review results
- Set thresholds; act on alerts

S — STUDENT

Learn & track

- Join with enrollment code
- Access enrolled-class content
- Take available quizzes once
- View own results and progress

P — PARENT

Understand & support

- Link to associated student(s)
- View attendance and quiz results
- Follow trends and recommendations
- Receive relevant notifications

Access boundaries are enforced by role, class enrollment, teacher authorization and parent–student association.

A clean data model supports trustworthy reporting

IDENTITY

Users • Roles • Teacher
Student • Parent

ACADEMIC

Class • Enrollment
Subject • Topic • Lesson

ACTIVITY

Session • Attendance

ASSESSMENT

Quiz • Question • Option
Attempt • Answer

MONITORING

Threshold • Alert
Recommendation • Notification

24-table initial ERD • 31 relationships • No standalone Performance entity

Performance indicators are calculated from source records; quiz topic context flows through linked lessons.

Trust is built into the workflow—not added at the end

ACCESS CONTROL

Server-side role and ownership checks

DATA PRIVACY

Students and parents see only permitted records

DATA INTEGRITY

Enrollment, attendance and quiz constraints

RELIABLE GRADING

Transactional submission; duplicate attempts blocked

PERFORMANCE

Efficient dashboards and reporting queries

RECOVERY

Backups, monitoring and deployment controls to define

QA covers unit, database/integration, authorization, functional, regression, performance and user-acceptance testing.

A proposed 12-week path from setup to release

W1	W2–3	W4–5	W6	W7–8	W9	W10	W11–12
INITIATE	**FOUNDATION**	**ACADEMIC CORE**	**ATTENDANCE**	**ASSESSMENT**	**ANALYTICS**	**INTERVENTION**	**RELEASE**
Scope • team • stack	Database • identity	Classes • lessons	Sessions • records	Quizzes • grading	Progress views	Alerts • notifications	QA • UAT • handover

MILESTONE: working release candidate → user acceptance → deployment & handover

Illustrative baseline for a small team—not a committed deadline. Re-estimate after team and stack confirmation.

Twelve work packages make delivery trackable

01 Project setup & clarification

02 UX & application structure

03 Database & backend foundation

04 Identity & access

05 Class & academic management

06 Sessions & attendance

07 Quiz authoring & availability

08 Student attempts & grading

09 Performance analytics

10 Alerts & recommendations

11 Notifications

12 Integration, QA & release

Resolve the unknowns before they become rework

Key delivery risks

- Stack and hosting not selected
- Team capacity may not fit the estimate
- Analytics may be built on insufficient data
- Incorrect access checks expose student records
- Notification channels remain undecided

Decisions still required

- Web / PWA / mobile client scope
- Backend, database and hosting choices
- Notification channels and providers
- Analytics formulas and minimum data rules
- Historical data import approach
- Retention, backup and recovery policy

Legacy technology and delivery assumptions are proposals only—not approved project decisions.

Build evidence first. Add intelligence later.

RELEASE 1

Reliable core + rule-based monitoring

- Structured learning and assessment data
- Analytics, thresholds and human-led action
- Real usage and feedback

FUTURE PHASE

AI-assisted personalization

- Generate questions—with teacher approval
- Personalized quizzes and adaptive difficulty
- AI analysis, feedback and recommendations

AI features FR-131 to FR-138 are explicitly deferred from Release 1.

What does a successful first release look like?

01

CORE JOURNEYS

Teacher, student and parent workflows demonstrated

02

CORRECT DATA

Enrollment, attendance and quiz constraints pass

03

TRUSTED RESULTS

Single attempt, unanswered=zero, grading verified

04

USEFUL INSIGHT

Analytics and rule-based alerts verified on sample data

05

SAFE ACCESS

Role and ownership tests pass

06

READY TO OPERATE

UAT accepted; deployment and handover complete

TRACK → ASSESS → ANALYZE → ALERT → SUPPORT IMPROVEMENT

Better insight.
Better support.

EduTrack connects the evidence—and helps turn it into action.

A freemium model creates a path to paid value

FREE PLAN

Start small. Experience the core.

- Up to 10 students
- One group
- Basic features
- Ads included

PAID PLAN

Grow without feature limits.

- Advanced features
- Unlimited groups
- No ads
- Free trial available

Student limits apply across all groups. Cancellation: turn off auto-renewal and retain access through the paid period; prorated refund for unused paid time.

Position around early intervention—not just record keeping

ALTERNATIVE	STATED STRENGTH	EDUTRACK OPPORTUNITY
EduScore	Management, quizzes, analysis, parent app	**Simpler experience + early intervention**
Hessity	Centers, schedules, attendance, payments	**Purpose-built for private tutors**
Daresly	Content, video, quizzes, grade tracking	**Lesson-level management + deeper analysis**
Darsio / Track Up	Direct tracking alternatives	**Own the intervention workflow**

Positioning and competitor descriptions are carried over from the supplied legacy deck; validate them with current market research before external use.

A lean delivery team keeps the MVP focused

INTERNAL

Backend development (.NET in legacy proposal)

OUTSOURCE

Frontend web / PWA
UI / UX design
QA & pre-launch testing

OUTSOURCE

DevOps & server setup
Deployment support

LATER

Native mobile app
Evaluate after MVP

This is a proposed resourcing model, not an approved staffing commitment.

Core infrastructure and operational components

CLOUD SERVER
Select hosting provider and deployment environment

SQL DATABASE
Select database engine and define growth approach

FILE STORAGE
Define storage needs for learning materials and uploads

BACKUPS
Define backup frequency, retention and restore process

GITHUB + CI/CD
Source control, automated builds and deployment workflow

SSL / HTTPS
Secure transport from day one

DOMAIN
Register and configure the project domain

PAYMENT GATEWAY
Integrate a payment provider if subscriptions are enabled

NOTIFICATIONS
Select channels and notification provider

MONITORING & LOGS
Define application monitoring, logs and alerting

Final provider choices will be confirmed during technical setup.

Launch is the start of validation—not the finish line

BUILD

Deliver core platform + monitoring

LAUNCH

Release to a focused set of real users

LISTEN

Collect feedback and observe real usage

VALIDATE

Check data quality, patterns and usefulness

IMPROVE

Prioritize refinements before AI investment

Only after reliable data and validated workflows: introduce AI-assisted features with teacher oversight.

This sequencing matches the legacy strategy and the agreed Release 1 boundary.
